Dear Hiring Manager:

As a third-year student attending the University of California, Santa Barbara, I am passionate about contributing to the clean energy transition through hands-on work in sustainability, energy systems, and project-based collaboration. I am currently pursuing a Bachelor of Science in Environmental Studies with an emphasis in Energy and Sustainability, and I aim to apply my academic background through opportunities in consulting, project management, and emerging technologies such as electric vehicles and renewable energy integration.

Through my previous work experience in fast-paced, team-oriented environments, I've developed strong organizational, communication, and problem-solving skills. While working as a server attendant at the Montage resort, I routinely managed high-pressure situations during peak service hours. To ensure efficiency, I took the initiative to delegate tasks, streamline operations, and enhance team performance. These experiences strengthened my ability to lead, adapt, and contribute meaningfully to collaborative workflows—skills that are essential in dynamic, mission-driven sectors like clean energy.

Academically, I've completed a range of coursework that explores energy technologies, grid systems, and environmental policy. I continue to deepen my understanding through upper-division classes and personal research in areas such as battery storage, wind and solar integration, and energy equity.

I'm actively seeking opportunities—whether through internships, research, or long-term roles—where I can contribute to innovative energy solutions, help communities transition to cleaner power sources, and ultimately make a positive global impact.

Sincerely,

*Lukas Lescano*
